To Whom It May Concern:

Recently ,Atmas has successfully completed with Shell supporting Technical Services a back to back Major Inspection on two MS 5001PA for our Gas Turbine Generation plant.

This also included full refurbishment of combustion parts such as : Buckets, Nozzles, TP's, Liners and Shrouds and included full refurbishment s of all auxiliaries such as , Fuel Pumps, Flow dividers, Atomizing Compressors, Gas Stop Valve, Lube oil Pumps, Bearings. We are fully satisfied with the services,work quality,response and professionalism which Atmas has shown during handling these both works.

I would highly recommended Atmas for both Technical Service and also Refurbishment Service to other clients who have gas turbines at their plants.

Best Regards
